Comment - To Whom It May Concern: I do support the expansion of Medicaid in Virginia. Good health is a fundamental right that everyone should have. I have always found it discriminatory that single men below the poverty line do not have access to Medicaid. By increasing the pool of people eligible for Medicaid we will help to make Virginia a healthier state. Everyone deserves good health and the best way to do that is to ensure that they have access to health insurance so that they can see a doctor when they need to. Also, when people have health insurance it means that they will go to the doctor before their illness gets serious so it reduces the financial burden. The faster someone sees a doctor when he/she is not feeling well, the less likelihood of complications from the illness. Thank you for your time and consideration.
