Comment - I have a daughter who is not able to afford to be on her husband's insurance at his work he makes minimum wage they have to children my daughter has not seen a doctor except those two times she was pregnant and able to be on Medicaid I am very very worried about her health. There is a family history on her father side of both men and women dying at young ages did a heart disease. I worry all the time that this could happen to my daughter because she has no access to any medical care. Please consider expanding Medicaid for people that are in situations like my daughter with the poverty income two children and not being able to work and pay for childcare. Thank you so much! Susan Whitehurst from Virginia Beach Virginia
